MORADO · EXECUTIVE & VIP PROTECTION

Protect the people behind the organization.

Executives, principals and other high-profile individuals are prime targets for impersonation, fraud and targeting, online and off. Morado continuously monitors social media, the dark web and the physical world around them, and gives your team the context to act before an exposure becomes an incident.

01
Build the profile
Names, emails, phone numbers and other selectors define each VIP.

02
Monitor continuously
Social platforms, breach data, the dark web, and news and emergency feeds around VIP locations.

03
Score every match
Confidence scoring separates real exposure from namesakes and noise.

04
Respond fast
Takedown support, credential resets and analyst-ready evidence, in one platform.

What we watch for

Social media impersonation
Fake profiles posing as VIPs fuel investment scams, phishing and wire fraud.

- Impersonating accounts tracked across social platforms
- Takedown support with evidence collection
- Lookalike domains and spoofed sites tied to VIP names

PII exposure
Leaked personal data drives identity theft and account takeover.

- SSNs, phone numbers and personal email addresses
- Breach dumps, paste sites and exposed files
- Confidence scoring on every PII match

Compromised credentials
Stolen passwords are the fastest path from a VIP to your money.

- Leaked credentials from breaches and infostealer logs
- Password policy validation to flag live risk
- Microsoft Entra workflow: force a reset, revoke sessions

Dark web targeting
Threat actors discuss, dox and sell access to high-value people.

- Mentions across dark web forums and marketplaces
- Doxxing and sale of VIP data or access
- Context from Morado AI to prioritize what matters

Physical security intelligence
Physical Security module

Digital threats and physical risk converge on the same people. Morado sets areas of interest around the places your VIPs live, work and travel, and watches for the news and emergencies that put them in harm's way.

- Areas of interest around residences and offices
- Civil unrest, crime, severe weather and natural disasters
- Alerts when events happen near a VIP location
- Geopolitical developments tied to upcoming travel
- A risk brief for every trip, before departure and in transit
- Correlated with doxxing and online threats

For security teams and MSSPs

Security teams protect their own executives and VIPs from one platform, alongside the rest of their intelligence program. MSSPs get full multi-tenancy: each customer has its own tenant, managed from one login, so you can deliver VIP protection across your customer base, including family offices, private equity and other high-value, low-profile customers.

One platform

Executive protection sits alongside dark web monitoring, brand impersonation, credential monitoring and exposure management, so every signal shows up in one picture. Prefer it managed? Morado analysts can run it for you.
